a.

Provide Factor Details

Box-Behnken Designs are supported for 3-12 factors. These factors must be continuous. For each factor, three levels are considered: a high, mid, and low level. Please provide the levels as comma separated values, e.g., '-1, 0, 1'. If only two values are provided for the levels, the mid level will be automatically calculated as the midpoint of the provided values.

Note: Add or Remove columns by right clicking on the table.

	Factor Names	Level Values
1	Temperature	5, 15, 25
2	Reaction_Duration	30, 75, 120
3	Concentration_A	50, 75, 100
4	Concentration_B	50, 75, 100
